

Early 19th Century Convex Dial Clock

Sold

REF: 244539

Depth: 17 cm (6.7")

Diameter: 37 cm (14.6")

Description

A good early English mahogany dial clock of traditional pegged case form. It has a thin outer turned wooden rim and a very heavy cast brass stepped shaped bezel. The convex dial is signed by the maker, W. Kirk of Stroud. The 8 day fusee movement has shaped plates an anchor escapement and a large brass bob pendulum with a shaped rod. A William Kirk is listed as working in 1856, although this may well be the next generation.
